

Krishna Madireddy

(512) 888-4868 · ksmadireddy@gmail.com · www.linkedin.com/in/ksmadireddy/

Platform Product Manager with 5 years spanning software engineering, platform ownership, and AI product development, plus 17 months of deliberate entrepreneurial building across the U.S., India, and Southeast Asia. Led workflow automation at GM that doubled onboarding throughput and reduced engineering overhead. Built production-grade agentic AI systems from scratch. Conducted on-the-ground research across two continents. Drawn to building at the intersection of platform thinking, technical depth, and ambitious areas: AI-native systems, developer infrastructure, and the built environment.

EXPERIENCE

Independent (US · India · Southeast Asia)

December 2024 – Present

KSM Studios: Agentic AI Product System

- Built a production-grade multi-agent system that transforms raw ideas into structured product artifacts (briefs, research, PRDs) using LLMs, RAG pipelines, schema validation, and versioned output management.
- Identified and resolved key failure modes in multi-step LLM workflows, including context loss and inconsistent outputs, by implementing guardrails (retry logic, schema validation, versioned artifacts) that improved reliability across long agent runs.
- Designed a four-tier agent architecture with strict isolation contracts ensuring public-facing agents never expose internal evaluation data: a deliberate product tradeoff balancing transparency with research integrity.

Dream Space: Startup Venture, Hyderabad, India

- Identified a market gap in India's home design industry: new homeowners rely entirely on word-of-mouth referrals to find architects and interior designers, with no structured discovery or vetting platform in existence.
- Conducted 15+ discovery interviews with homeowners, architects and developers at the Hyderabad Architect Expo and across the city, mapping workflow pain points and validating demand on both sides of the marketplace.
- Developed a marketplace concept, business model, and working web prototype to connect homeowners with verified design professionals, informed by direct observation of a fragmented, relationship-driven market.

Placemaking & Commercial Real Estate Research

- Conducted deep market research across three coffee shop business models: U.S. franchise import, city-government park partnership (Round Rock, TX), and independent commercial real estate acquisition (Dallas, TX).
- Engaged directly with municipal officials and commercial landlords, navigating permitting, zoning, and lease negotiation processes, developing firsthand understanding of real estate deal dynamics and regulatory constraints.
- Traveled across Asia and Europe studying third-place culture, hospitality design, and how physical environments create economic and social value, informing a design-driven thesis on placemaking in the U.S. market.

Cookster: Product Advisory, Early-Stage Consumer Startup

- Advised product direction and prioritization, applying structured evaluation and agentic workflow patterns to help the founding team sharpen their roadmap.

Product Manager, MaxIO – General Motors

July 2023 – November 2024

Cloud-native telemetry platform. Shared ingestion, processing, and deployment services

- Identified a structural bottleneck through direct discovery with engineering teams, then designed and drove execution of an automated self-serve onboarding system that doubled throughput and reduced per-customer engineering support overhead by 12 hours.
- Made the deliberate call to halt non-core client onboarding during Phase 1, a trade-off that protected developer capacity, accelerated time-to-value for existing clients, and became the platform's key inflection point.
- Standardized core client integration and deployment workflows to resolve early scaling challenges, reducing time-to-production by 3 to 4 hours and enabling autonomous deployments.
- Introduced clear ownership and governance across platform initiatives, enabling faster prioritization decisions and reducing coordination overhead as adoption grew across multiple engineering teams.
- Drove platform adoption through internal demos, documentation, and centralized onboarding resources, increasing MaxIO's visibility 2 to 3x across the org.

Software Developer -> Scrum Master -> Product Owner

January 2021 – July 2023

Platforms: MaxIO, MaxGEO, MaxTransit

- Progressively expanded scope across 3 internal platforms, owning intake, prioritization, and translating stakeholder needs into clear product requirements and workflows.
- Designed developer-facing onboarding and configuration flows that reduced setup errors and rework, forming the foundation for the platform PM role that followed.
- Mentored under a senior PM in the months before the platform PM transition, learning PRD craft, stakeholder navigation, and the operating cadence of formal product management.

ConocoPhillips – Data Analyst Intern

2019

LiveOak Technologies – Marketing Consultant Intern

2018

Vuesol Technologies – Mobile App Development Intern

2017

SKILLS, TOOLS & CERTIFICATIONS

Certifications: Reforge: Product & AI tracks, Professional Scrum™ (PSM I), Interior Design Institute (in progress)

Platform & Product: Platform Strategy, DevEx, Workflow Design, System Abstraction, Customer Discovery, B2B SaaS

AI & Agent Systems: Agentic Workflow Design, LLM Applications (OpenAI, Claude), Prompt Engineering, RAG, Multi-agent Orchestration, Schema-validated Pipelines

Tools: Azure DevOps, Figma, Notion, Python, Node.js, Next.js, Docker, Kubernetes/Helm, Cloud Orchestration

EDUCATION

University of Texas at Austin – B.S. Mathematics (CS & Entrepreneurship minors)
